

Dysfunctional Myelopoiesis and Myeloid-Derived Suppressor Cells in Sepsis Pathobiology

If you're 45 or older, you're invited to participate in our research study.

You can be a healthy control

This is an observational study of critically ill patients diagnosed with sepsis and trauma. The purpose of this research is to better understand the body's response after sepsis and trauma.

As a healthy control you will be asked to donate blood to serve as a reference control to improve our processing of samples and assure efficient use of the samples we receive from you and our critically ill patients.

Are you eligible?

- All adults (age ≥ 45)
- Ability to obtain Informed Consent before blood collection

Principal Investigator:
Lyle Moldawer, PhD
Professor of Surgery
Director, Sepsis and Critical Illness Research Center
