Gut Microbiome Dysfunction in Sepsis and Trauma Survivors

**Looking to
volunteer?**

You're invited to be a healthy control

This is an observational research study of critically ill patients diagnosed with sepsis and trauma. The purpose of this research is to verify if the microbiome in sepsis and trauma patients is different from healthy patients.

As a healthy control you will be asked to donate blood and stool to serve as a reference control.

Eligibility

- Adults 45 and older
- Ability to obtain Informed Consent prior to blood collection.

Principal Investigator:

Philip Efron, MD,FACS, FCCM
